GVQ-047Y Series V-port Segment Ball Valve (Flange)

Overview

GVQ-047Y series v-port segment ball valve is primarily designed for flow control, and it can also be used for shut-off operation. The notched port on the segment ball contributes to strong shear stress to cut through media with fibers and particles. Consequently, this v-port segment valve is a good general control valve for most pulp and paper process applications, or similar flow contains fibers and particles.

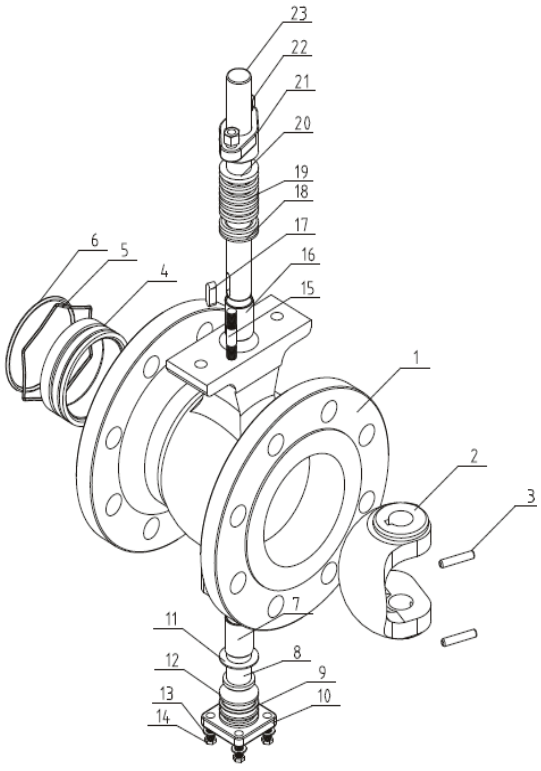

Application

Pulp and Paper / Waste Water Treatment / Food and Beverage / Chemical Plants / Power Plants / Steel Industry / Etc

Body
• Single-piece body prevents leaks caused by separate flanges or locking rings.

V-port Segment Ball:
• Specially designed V-notch ball provides strong cutting stress and tight sealing. Well ground notched ball surface ensures small operating torque and tight seal, especially for metal seated segment valve.

Seat
• Special seat design eliminates cavity between seat and valve body. This, consequently, prevents media from jamming between seat and body, ensure reliable sealing.

Seal Surface
• Nitriding / Tungsten Carbide / Satellite Alloy / Nickle Base Alloy plating are available for abrasive media.

Stem
• Stem is finely grounded to match actuator excellently, which prevents rocking motion and potential failure of the v-port segmented valve.
• Close-fit spline or pin-key are available for stem-segment ball connection to provide reliable transmission without motion lost or dead band.
